Top Air Exhaust

MMR-42

MMR-46

MMR-54

Applications:

- Deli
- Produce
- Bakery
- Front End

Features

Rear exhaust on these self-contained models has been beneficial in areas where hot exhaust air poses a problem, such as: Produce, Front, Ends and against walls or fixtures.

This system allows your merchandisers to bring refrigerated products into the center of your produce racks, introducing cross merchandising with related products, without jeopardizing the integrity of the surrounding produce.

Top exhaust of condenser air will make shopping conditions more comfortable for customers at the front end while checking out, giving you your last impulse opportunity.

Available on all MMR Case Models
